

## CCFE Advisory 2009-20

June 22, 2009

### Re: Required Java Version Upgrade for CCFE & CCX Trading Platform

To run the CCFE/CCX Trading Platform optimally, users are required to have java version **1.6.0\_03** or later installed on their computers. Effective June 30, 2009, The CCFE/CCX trading platform will **not** allow logins with prior versions (i.e. you will have to have 1.6.0\_03 or newer). Per the article <http://java.sun.com/j2se/1.5/>, Sun Microsystems announced the End of Service Life for the previous versions of the plug-in and will no longer support them after October of this year. CCFE/CCX is making this transition now to ensure a smooth transition and also to take advantage of new features provided in the Java Plug-in version 6 family.

To download the correct java version on your computer or remote desktop, please proceed to this URL: <http://www.chicagoclimatex.com/content.jsf?id=941> and download SUN Java Plug-in 1.6\_03 under Technical Downloads.

Please ensure that the appropriate staff within your organization and relevant customers are advised of the content of this advisory.
