

CCFE Options Trading System Setup and Connectivity

System Requirements:

Windows 2000 or above

Sun Java 1.6_01 or later

When logging in for the first time, the application will look for java 1.6. If not installed, the user will be prompted for installation. Alternatively, the latest version of java can be downloaded at the following url:

<http://java.com>

Network Requirements

Production - Port 80 and 443 enabled for socket connections to 70.42.70.0 /24.

Staging/Demo - Port 80 and 443 enabled for socket connections to 204.13.14.0/26

Please ensure that port 80 is open for socket connection (outbound, established, bi-directional, etc, depending on the type of appliance or application you use) for our application.

If you are unable to grant network access for the regular client, there is a client version compatible with most proxy servers. On the login page select the "Exchange Proxy" option in the (Connection Options) box

Configure Desktop Client – You must be logged in as an Admin to install CCFE Options Terminal

Then visit www.ccfex.com. Click on the **Options** button on the right side of the page. This will direct you to a new page. Once the page is fully loaded please click on **Log On**. Once the application begins to download, you will see two pop-up windows. The first will be a security warning. This states that our digital signature has been verified, please click **Run**.

Once you say yes, the application will continue to load. Please enter the log in information that was assigned.
